

Introduction

Rising unemployment, DOW in decline, state budgets in gridlock, recession, depression and accumulating bad economic data. We recognize along with many of you that our disintegrating economy will lead to severe impairment of the centralized systems and services we have all come to depend.

Many have put this out in what might be called doom and gloom. We do not include ourselves among such individuals. We are not survivalists and our mission is not to induce or spur panic. Rather, we come to you as realists, with a message of hope based upon human knowledge as manifest in modern science and technology.

We are Community for Tomorrow. Our mission is to create a template that will enable communities to locally produce next generation industries and products that will allow them to prosper into the future even with this coming crisis. A critical component to this template is to provide the knowledge to the individual so that he or she can acquire the skills necessary to become an active participant in this new growth within the community.

With the hope of attracting others to join us, we have put together a video series that brings this mission to you in a concise manner.

This series begins by explaining the severity of the problems that we now face. And at its most basic level, our present financial crisis has the same origins as those in the past. But the important point that needs to be made is that the origins are the same but the consequences are not. The course of our financial crisis could be very different due to large scale cultural impact of modern science and technology. In this video series, we will take a look at how these technological differences could, without deliberate intervention, amplify the adverse effects upon the individual as a result of this developing crisis.

We again want to stress that we are not doom and gloomers. However, all of the solutions that others have put forth so far to solve our present financial problems could lead one in that direction. We will review these solutions and outline why they are too weak and unrealistic for our present circumstances. We will also introduce our solution that we believe will stabilize out the community and allow it to prosper into the future.

As for the message presently being put out by the media, financial experts and politicians, we must say that we are whole-heartedly in disagreement with it. They are telling us there is nothing to worry about because they have things well under control. But the truth of the matter is, this is far from the case, and it is time to start worrying. For worry, when used correctly, will spur you to actions that you would otherwise not take, and great action is now essential. Those of us who understand this must begin to work together with a common, rational goal in mind.

We encourage you to watch our series of videos, *The Fourth Industrial Revolution: A Sound Solution to the Economic Crisis*, in order to get an understanding of the scope of our vision. It is different from anything you've seen or heard before. And in the end, after you have been exposed to this new knowledge, we hope you will join us in this great quest towards building a new and powerful civilization.
