"hope through next generation science and technology"

## PRESENTS: The Fourth Industrial Revolution: A Sound Solution to the Economic Crisis

### What is The Fourth Industrial Revolution?

The Fourth Industrial Revolution comprises the known next-generation technologies that will bring about the reformation of civilization by providing a basis from which to create sustainable local communities.

### What are Next Generation Technologies?

Next generation technologies are not simply products or services, but entirely new ways of thinking, communicating and collaborating; they require a massive shift in the development and implementation of technical systems.

### Why is this necessary?

It is the answer to our current economic crisis which is going to become increasingly unbearable over the next few years. Under our present systems we have come to the end of our ability to increase productivity and stay ahead of the inflation caused by our monetary system.
